"GENUINE AND GOOD."

"The physicians," he says, "order good whiskey," meaning BELLE OF BOURBON, of course, "and leave it to attendants to find it as they may. Some possess the faculty or the knowledge necessary to get genuine liquors, but the vast majority, even among the intelligent, do not."

I cheerfully recommend the same for family and medicinal purposes.

BELLE OF BOURBON IN FEVER.

The use of BELLE OF BOURBON Whiskey has revolutionized the treatment of fevers, and thousands of lives have been saved. Formerly Typhoid Fever was regarded as almost incurable; recovery was the exception—death the rule. Now, owing to the use of Whiskey, death resulting from Typhoid Fever is the exception—recovery the rule. So it is in Surgical Fevers, which are now readily controlled by stimulants. Dr. Lewis Sayre, eminent orthopaedic surgeon, regards pure Kentucky Whiskey as the BEST OF ALL MEDICAL AGENTS in controlling and regulating the pulse in fevers resulting from injuries or surgical operations.

A CURE FOR CONSUMPTION.

The venerable Dr. McREADY, the distinguished American lecturer, sometimes called the Father of American Therapeutics, used to give equal parts of sweet milk and whiskey as a prescription for consumption as the most efficient and only satisfactory remedy for that disease, even after cavities had been formed in the lungs, and his treatment was most successful, resulting in many almost miraculous cures.

WHY BELLE OF BOURBON IS PURE.**EMINENT PHYSICIANS**

There are valuable properties naturally existing in the grain, which always carry the flavor and character and give their characteristic flavor to the distilled spirit. These can scarcely be considered as impurities, but there are other properties obtained during the process of fermentation which serve scarcely to contaminate the product. Among these are FUSEL OIL or GRAIN OIL, methyl alcohol, which is added both to the small and large, and from which, aside from the poison they contain, it is very desirable that the spirit should be freed as far as possible. This is accomplished in the manufacture of BELLE OF BOURBON, in the production of which only the flinty part of the grain is used, thus freeing it from Fusel Oil before it is distilled, and it is further improved by the

WHAT THE DOCTORS HAVE TO SAY.

The late Dr. Cowling, who was considered the highest authority in his time, and who was fully aware of the purity of the "BELLE OF BOURBON," wrote in the *Medical News*, of which he was editor, in the discussion of the so-called temperance discussion: "Alcohol will always be administered to the sick. Its abuse, and not its use, may be abandoned."

The sick are going to have alcohol in some shape, and a matter of the first importance is that the liquors administered to them be ABSOLUTELY PURE.

WHISKEY was introduced into the Pharmacopœia as a substitute for Brandy, and is preferable to Brandy as a medicinal agent, since it can always be obtained of good quality. It is also used as an antiseptic dressing for wounds, etc.
